June 14, 1988

The Honorable Pat Williams
Chairman, Subcommittee on
Postsecondary Education
Committee on Education and Labor
House of Representatives

Dear Mr. Chairman:

On May 31, 1988, we met with staff members of your Subcommittee and other congressional staff members. At that meeting, we discussed some preliminary results of our analysis of the characteristics of borrowers and defaulters in the Guaranteed Student Loan (GSL) Program. This report provides a summary of the information presented during that meeting.

This analysis was done as part of our ongoing study of guaranty agencies' activities required by section 1311 of the Higher Education Amendments of 1986. We used the Department of Education's latest cumulative computerized data base on the status of guaranteed student loans made through September 30, 1987. This data base, commonly referred to as the "GSL Tape Dump," is generated from records prepared by guaranty agencies and submitted to the Department at the end of each fiscal year. It contains records on loan amount, loan status, and borrower characteristics on loans made since the program began.

We focused on the over 1,182,000 borrowers who (1) received their last loan in 1983 and (2) had either begun to repay or had defaulted on their loans as of September 30, 1987. We analyzed 1983 loans because they are old enough that most defaults which are going to occur will already have occurred. Default statistics were calculated for this analysis as the number of 1983 borrowers who defaulted by September 30, 1987, divided by the total number of students who received their last loan in 1983. While individual records in the Department's tape dump are often incomplete and we did not verify the data, they are the only national data base on the GSL program.

On February 2, 1988, we testified before your Subcommittee and presented some general defaulter attributes obtained from this data base. As we noted then, we believe the file provides useful information on borrowers' and defaulters' characteristics when used to calculate aggregate statistics.

Loans guaranteed through 1987 totaled over \$70 billion—with outstanding student debt almost doubling during the last 5 years. During the same 5-year period, total defaults increased by 276 percent. In fiscal year 1987 alone, federal default claims amounted to about \$1.3 billion. Of the approximately 1.18 million borrowers who obtained their last guaranteed loan in 1983, 18 percent (over 228,000) had defaulted as of September 1987. Default rates varied substantially, however, depending on students' income levels, the type of schools they attended, and whether they were financially independent. Some of the more significant findings are summarized below.

Vocational School Students Defaulted at Higher Rates Than Other Students

Overall, 35 percent of vocational students defaulted. This ranged from 13 percent for students dependent upon their families for financial support and whose families had incomes of \$30,000 or more, to 53 percent for independent students—those receiving no financial assistance from a parent—with family incomes of less than \$10,000. In contrast, the overall default rate for students attending traditional 2- and 4-year schools averaged 12 percent, or about one-third the rate for vocational students. Default rates for students at 2- and 4-year schools ranged from 5 percent for dependent students from families with incomes of \$30,000 or more, to 21 percent for independent students with family incomes of less than \$10,000. Family income used in the computations shown in this report are at the time of loan application. (See p. 12.)

Independent Students Defaulted at Higher Rates in Each Income Category Than Dependent Students

Overall, 28 percent of independent students defaulted compared with 15 percent of dependent students. The default rate for independent students ranged from 7 percent for those from families with incomes of \$30,000 or more who attended traditional 2- and 4-year schools, to 53 percent for those from families with incomes of less than \$10,000 who attended vocational schools. The related rates for dependent students ranged from 5 to 43 percent. (See p. 12.)

Borrowers Who Attended School for One Year or Less Defaulted at Higher Rates Than Those Who Continued Beyond One Year

Overall, almost 33 percent of those who attended school for one year or less defaulted on their loans, ranging from 23 percent for those who attended traditional 2- and 4-year schools to 39 percent for vocational school students. In contrast, 11 percent of borrowers who attended for more than one year defaulted, ranging from 10 percent for those who attended traditional 2- and 4-year schools to 22 percent for vocational school students. (See p. 10.)

Included with this letter as an appendix are the charts used in our May 31 briefing. They contain more detailed statistics on each of the topics discussed in this letter.

Given the time available to prepare this report, we were unable to obtain agency comments. We are sending copies to other congressional committees, the Department of Education, and other interested parties. Should you wish to discuss the information provided, please call me on 275-5365.

Sincerely yours,

William J. Gainer
Associate Director
